Shubham Yadav

Power Platform and SharePoint Developer | Power Apps, Power Automate, Data Engineering
+91 7276085461 | shubhambhagwatyadav@gmail.com | linkedin.com/in/shubhambhagwatyadav

Technical Skills

Power Platform & AI: Power Apps, Power Automate, Power Automate Desktop (RPA), Power BI, Dataverse, Power Fx, Copilot Studio, AI Builder, Azure AI Foundry
Cloud, Database & Data Engineering: Azure Databricks, Azure Functions, Logic Apps, Azure SQL, FAISS Vector Stores
SharePoint & Migration: SharePoint Online, SPFx, PnP Framework, ShareGate
Languages: C#, Python, JavaScript/TypeScript (React, JSX), HTML/CSS, XML, PowerShell, SQL
Tools & Version Control: Git, Jira, Confluence, VS Code
Certifications: PL-600, PL-400, AZ-204, PL-900, MS-900, AZ-900, AI-900, SC-900

Education

Wilfrid Laurier University — Waterloo, ON
Master of Applied Computing — *Sep. 2024 – Dec. 2025*

Pune University — Pune, MH
Bachelor of Computer Engineering — *Apr. 2017 – May. 2021*

Experience

KPI Partners — Pune, MH
Data Analyst II (Power Platform & AI) — *Nov 2025 – Present*

- Designed and developed the comprehensive **Vital Signs Review Power BI report** applying **user-centric design principles**, including end-to-end semantic modeling, custom interactive visuals, and embedded **Power Apps Canvas Apps**, accelerating clinical data evaluation by **60%** for Scientific and Medical Reviewers.
- Engineered a bulk-edit update mechanism using Dataverse/SQL *Patch* and *ClearCollect* functions, bypassing **1,000-record delegation limits** by triggering dynamic dataset and visual refreshes via **Power Automate HTTP webhooks**.
- Drove the adoption of an **automation-first mindset** by developing a highly efficient **Power Automate workflow** integrated with **AI Builder** to automatically evaluate business risk descriptions and generate Risk Assessment and Categorization Tool (RACT) categories. Optimized the pipeline by batching array chunks and executing **Databricks SQL MERGE** statements, saving **15+ hours** of manual assessment weekly.
- Built an automated **AI Builder** pipeline connected to **Azure Databricks** to query new and changed patient vitals (e.g., BMI, BP), utilizing custom LLM prompts to automatically generate clinical health risk queries directly into an **Azure SQL** database.
- Guided and supported junior to mid-level engineers through **mentorship and technical advice**, ensuring alignment with Power Platform governance, security guidelines, and architectural best practices.
- Leveraged **Azure AI Foundry** models to accurately extract data from vendor contracts and medical invoices, achieving a **95%+ accuracy rate (confidence score)** in automated data capture.
- Implemented Azure AI Foundry's **Content Understanding** service to cross-reference extracted contract and invoice data, identifying procedure pricing disparities, replacing a highly complex **Python** script, and decreasing processing time by **50%** and cost savings of **70%**.
- Integrated **Azure Databricks** semantic models into **Power BI** reports, allowing workflows to seamlessly execute structured data operations and **ETL pipelines** directly into Databricks and SQL tables.
- Automated the dynamic scaling of **Fabric Capacity** utilizing **KQL alerts** and **Logic Apps** to ensure cost-efficient cloud resource utilization, reducing unnecessary compute costs.

Wilfrid Laurier University — Waterloo, ON
Power Platform Assistant (CO-OP) — *May 2025 – Aug 2025*

- Developed a **Power Automate** flow integrated with webhook events to automatically generate and deliver **custom certificates** upon student course completion, which **saved 16 hours** per week.

- Used **Microsoft Copilot Studio** and developed **Copilot Agents** to answer student inquiries using a private knowledge base.
- Designed and deployed an authenticated **Power Pages** Student Dashboard, empowering students to securely view their enrollment history, active courses, grades, and financial statements in real-time.
- Developed a dynamic Live Course Catalog within the portal by leveraging the **Power Pages Cloud Flow API** to trigger **Power Automate**. The flow utilized HTTP connectors to query the Destiny One **REST API**, processed JSON payloads, and synchronized live course descriptions directly into **Dataverse**.
- Designed and updated sections of the university website, including **FAQ** and **tax documentation** pages, which helped decrease recurrent student queries by **83.5%**.
- Built multiple **Canvas and Model-driven Power Apps** for internal teams to manage student requests, track queries, and monitor **Modern Campus Destiny One** ticket status, used daily by 6 staff members.
- Supported the large-scale transition of **27,000 police officers** to the Modern Campus Destiny One platform, ensuring accurate data migration and minimal disruption.
- Implemented a recurring **Power Automate flow** leveraging **REST API** calls to automatically notify students with incomplete profiles, **saving 32 hours** per week by reducing manual outreach.
- Followed Power Platform governance and **CoE practices** to manage environments and ensure security compliance for university applications.

Accenture Solutions Pvt. Ltd. Pune, MH

Packaged App Development Analyst (SharePoint and Power Platform Developer) *Aug 2021 – Aug 2024*

- Handled cross-tenant SharePoint migrations using **PowerShell** and **ShareGate**.
- Developed an intelligent **Power Automate Desktop (RPA)** flow to automate post-migration testing across thousands of SharePoint Online sites, autonomously navigating pages to verify UI integrity and capture error screenshots.
- Modernized legacy data collection processes by architecting and developing multiple **Power Apps** to replace deprecated **InfoPath forms** during a large-scale enterprise migration.
- Worked with **Dataverse** and **SharePoint Lists** to optimize workflow efficiency, reducing manual inputs for a leading European banking client.
- Followed Power Platform **ALM** best practices using solution layering, environment variables, and managed/unmanaged solutions to streamline deployment between Dev, Test, and Prod environments.
- Worked within **Power Platform Center of Excellence (CoE)** framework to maintain governance, app lifecycle policies, and drive **process improvement and compliance methodologies** (including DLP) across multiple environments.
- **Architected**, engineered, and automated custom **Canvas and Model-driven Power Apps** and **Power Automate workflows** for various North American clients, which included approval workflows, state machines, and complex SharePoint list updates.
- Created dashboards and reports to monitor migration progress in multiple projects using **SharePoint** and **Power BI**, which were used by 4 senior managers and 9 team leads.
- Ensured **data integrity** during the complex migration of **500+ Nintex** and **SharePoint Designer** workflows to Power Automate.
- Designed **custom webparts** for SharePoint sites, improving UX and **data accessibility**.
- Lead agile development and managed **end-to-end solution delivery** in sprints using **Jira** for backlog management and **Confluence** for documentation.

Technical Projects

Context-Aware Institutional RAG Chatbot | *Python, Flask, OpenAI API, FAISS, Crawl4AI* Feb 2026 – Mar 2026

- Engineered a custom Retrieval-Augmented Generation (RAG) backend using **Python**, **Flask**, and OpenAI's GPT models to securely query unstructured institutional data while avoiding out-of-domain hallucinations.
- Implemented an optimized semantic search pipeline utilizing a **FAISS** dense vector index and *text-embedding-3-large*, populated via a resilient, caching web crawler built with **Crawl4AI**.

- Developed a zero-shot query rewriting mechanism to maintain coreference resolution and conversational context across multi-turn interactions.
- Evaluated the pipeline using the **Ragas framework**, achieving a perfect 1.0 Context Precision score while demonstrating robust architectural adaptability for local LLM deployment.

CMS Consolidation and Migration | *Power Apps, Power Automate, SharePoint, Power BI* Apr 2023 – Aug 2024

- Consolidated M-Files and Efecte into a unified **SharePoint Online** environment to enhance data accessibility and reporting.
- Developed custom **PowerShell scripts** for efficient data migration, ensuring integrity and normalization during transition.
- Created interactive **Power BI** dashboards to monitor migration progress and proactively identify issues.

Employee Churn Prediction | *Pandas, NumPy, scikit-learn, SVM, XGBoost, CatBoost* Sep 2024 – Dec 2024

- Developed a predictive **machine learning** model to identify employees likely to leave, enabling proactive retention strategies, risk mitigation, and reduced turnover costs.
- Performed comprehensive **preprocessing**: missing-value handling, categorical encoding, and feature engineering to enhance model performance while maintaining data integrity.
- Evaluated Random Forest, SVM, XGBoost, and CatBoost; selected Random Forest with an F1 score of 0.722 and an accuracy of 83.0%.

Professional Skills

Analytical Skills: Advanced data analysis, statistical modeling, trend analysis, forecasting
Communication: Excellent verbal and written communication, report generation, stakeholder collaboration
Organizational Skills: Stakeholder collaboration for Power Platform governance and solution adoption, Strong planning and prioritization, project management, multitasking
